Pearson China Enterprise GTM & Development Plan

Not "opening another country" — the on-the-ground execution of Pearson's Enterprise Skilling growth pillar, attacking the language-capability gap of China's going-global firms.

ForMark Couchman **By**Hans Zhang **When**2026-08-24 ~ 08-28 · Mark's China visit
Versionv4.4 (v4 design system + charts)

0. Executive Summary / 一页纸

TL;DR — China Enterprise is not "opening another country." It is the on-the-ground execution of Pearson's **Enterprise Skilling** growth pillar, attacking the language-capability gap that **McKinsey finds >50% of Chinese firms call their toughest internationalisation challenge** — and **HBS's Neeley finds 78% hit a "talent fault line" abroad (45% blame cross-cultural friction for delayed projects)**. We already have a running engine (50-account system, 9 named P0s, 3 delivered diagnostics) — this plan asks for the decisions and assets to scale it.

Dimension	One-liner
Opportunity	70% of Chinese firms are already overseas; 40% expat-failure rate; 1.8M+ Chinese staff abroad — language capability is now a revenue precondition, not an HR cost.
Position	Globally the only player with a GSE-anchored measure → learn → verify closed loop. The higher a firm's overseas exposure, the more

Dimension	One-liner
	we're worth.
Play	Versant as wedge (low-friction, data-driven entry) → Mondly expansion (land-and-expand); diagnostic hook + co-sell bridge amplify.
Status (not from zero)	50-account engine live · 9 named P0s · 5 P0 decision-makers identified · 3 diagnostics delivered · co-sell tiers built.
12-mo target	15-20 paying accounts · ARR ¥10m+ · ≥90% renewal · 2+ China-local case studies.
What I need from you	China pricing authority · in-country hosting decision · localisation timeline · intro to Sharon Hague / Vishaal Gupta · global case rights · local pre-sales/CS headcount.

The one decision that gates everything else: China Year-1 ARR target — **¥5m / ¥10m / ¥20m**. It sets team size, pricing posture, and hosting investment. Recommend we align on this in week 1.

1. Why China, Why Now / 市场判断

Bottom line — The Chinese outbound wave has moved from "selling products abroad" to "operating capabilities abroad," and language is the bottleneck McKinsey finds >50% of firms call their toughest internationalisation challenge — with 78% reporting a "talent fault line" going global (Neeley, HBS).

1.1 Outbound 3.0: from product export to capability export

Signal	Source
70% of surveyed firms already overseas; 67% rank overseas expansion as a top-1-3-yr strategy	Deloitte China / CPA Australia, <i>2025-26 Chinese Enterprise Going-Global Survey</i>

Signal	Source
>50% of firms rank talent shortage as the most formidable internationalisation challenge	McKinsey, 2025
78% of Chinese globalising firms hit a "talent fault line"; 45% cite cross-cultural friction causing project delays	Neeley (Harvard Business School), 2025
Expat-failure rate up to 40% (selection by résumé, no standardised language assessment)	Industry survey, 2026
Manufacturing ODI stock USD 420bn+ ; 26k+ overseas plants; 1.8M+ Chinese staff abroad	CCPIT, 2026
80%+ manufacturers rank "continuous international-talent cultivation" as their #1 resourcing priority	CCCME, <i>2026 Top-100 Manufacturers Going-Global Survey</i>
Language commonality can lift trade volume +44%	Academic study

1.2 Market shape

- Corporate English-training market **>¥30bn** (our own outbound report: the China enterprise-language-training market has already surpassed ¥300bn; digital/AI delivery >50%; **CAGR >20%**).
- Demand has shifted from generic courses to **scenario-, role-, and outcome-specific** workforce programmes — exactly our lane.
- Buying power has expanded from HR to **overseas-business owners** (the budget-holders who actually feel expat failure and localisation stalls).

1.3 Narrative anchors

"Language capability is not an HR cost line — it is a precondition for X-billion of overseas revenue." "High-exposure / low-measurement mismatch: high overseas

revenue share, but no unified gauge of language readiness."

2. Strategic Positioning / 我们凭啥赢

Bottom line — To see *why we win*, start from the customer's job: lifting English job-capability across a workforce is a multi-stage journey (diagnose → benchmark → learn → practice → verify → measure). Pearson is the only vendor with a product for every stage on one ruler (GSE). The next sections walk that journey, then prove the gap. This is about *why we win*, not *what we have*.

2.1 Where we sit in the Group strategy

Pearson strategy (Journey Story / Our Strategy):

- **1 Core Skill Set:** Assessment & Verification — the trust bedrock in the AI era.
- **3 Growth Pillars:** ① Next-Gen Education ② Early Careers ③ **Enterprise Skilling**
← *"Companies need to plan for and develop the workforce of the future. Continual skilling in the flow of work."*

→ **China Enterprise GTM = execution of the Enterprise Skilling pillar.** What we sell enterprises is language capability "in the flow of work."

2.2 The enterprise language-upskilling journey (the customer's job-to-be-done)

Any company trying to lift its people's English *job-capability* — for overseas posts, cross-border teams, or customer-facing roles — goes through the same recurring loop. This is vendor-neutral; it is the work itself:

1. **Diagnose** — Where is the person today vs. what the role demands?
2. **Benchmark** — Set the target on a common ruler (a role-based English standard).
3. **Learn** — Build the missing skill.

- 4. **Practice in the flow of work** — Use it on the job, not just in a classroom.
- 5. **Verify / certify** — Prove the gain; issue a credential.
- 6. **Measure & loop** — Did capability move? Did the business move? Then re-diagnose.

The vendor who can stand beside the customer at every step — on one consistent ruler — is the vendor who owns the relationship.

2.3 How Pearson powers every step

Each stage of that journey maps to a Pearson asset, and every asset speaks the same language: the Global Scale of English (GSE).

Journey stage	Pearson product	China role
Diagnose	Versant — AI-scored 4-skill test, 24×7, instant score	Wedge (hire / expat / re-test)
Benchmark	GSE / Job Profiles — English benchmark for ~1,400 roles	Role-standard weapon
Learn	Mondly (Essential/Enhanced/Ultimate), Mondly VR , Pearson English Connect (Wizard by Pearson as institutional backup)	Expansion (training)

Journey stage	Pearson product	China role
Practice	Communication Coach (in-Teams, co-built with Microsoft), Digital Language Tutor (Mondly in-app role-play)	AI-era story
Verify	PEIC — International English certificate	Verification close
Measure & loop	Versant re-test + quarterly capability report	Lands in L&D budget

Because all six sit on GSE, the hand-offs are seamless: a Versant score feeds a Job Profile target, which feeds a Mondly learning path, which feeds a Coach practice loop, which closes in a PEIC credential and a re-test that shows the movement. One ruler, one data thread.

2.4 Why this makes us the only closed loop (Why We Win)

No competitor covers all six stages on one ruler. The gaps are structural:

Versus	Where they fall out of the journey	Our edge
Beisen / Moka (HR SaaS)	English is 1 of 7 assessment dims; no GSE benchmark; no training loop — they stop at Diagnose	They own the HR entry point; we own the full journey
EF / Education-first	Courses without role-targeted measurement; no hiring-side assessment — strong on Learn, missing Diagnose & Verify	Measure + learn + verify in one quantifiable business case
TOEIC (point exam)	Test-only, weak speaking, no role mapping — they stop at Diagnose/Verify	Full loop + speaking-first + Job Profiles

Versus	Where they fall out of the journey	Our edge
Cambridge Linguaskill	AI-CEFR test used by Adidas/Siemens/HSBC/Deloitte; strong on Diagnose/Verify, no GSE role mapping, no learn loop — stops at assessment	Full loop + GSE Job Profiles (1,400 roles) + min-to-score + Mondly land-and-expand

The differentiator is not "we have more products" — it is that *we are the only vendor who can walk the entire capability journey with the customer on a single ruler*. That is why we win.

2.5 Group ammunition (FY25 + earnings call + hub)

- **ELS built a Global Enterprise Sales team in 2025**, signing 9 enterprise partnerships (Microsoft/AWS/Google Cloud; HCLTech/Cognizant/IBM) worth tens of billions to 2030.
- **Mondly has pivoted fully to institutional/enterprise** (CEO Abbosh, verbatim) — our China play aligns with Group strategy.
- **Pearson × AWS "Takes AI Readiness Global"** (DC → Indonesia) — China analogue: Azure / AliCloud / Tencent Cloud.
- **ELS £226m 2024 sales** (ex-ITP) — China adds to this pool.
- **Lost in Transition report** (Pearson global insight: cost of broken learning-to-earning transitions) — authoritative backing for our pitch.
- **"Flight to safety" narrative** (Abbosh): in an era of AI-generated content flood, enterprises want trustworthy, verifiable skills — exactly Versant/PEIC's position.

3. GTM Strategy / 我们怎么选、怎么玩

Bottom line — We select by *overseas exposure* (the firms that feel the pain pay), we enter through a low-friction Versant wedge, and we scale through co-sell — not by competing head-on with HR platforms.

3.1 Segmentation axis: overseas intensity (primary)

Segment	Meaning	Play
Overseas revenue ≥40% (or absolute ≥¥10bn)	High exposure	P0 direct + full journey
Large overseas workforce + English gate	High pain	Versant volume screening
Going-global 0→1	Early	Diagnostic-hook nurture
Industry: mfg / new-energy / e-com BPO / EPC	Scenario demand	Industry content packs

3.2 Targeting logic: five-step targeting loop (already running)

Entry hard-gate (any one): overseas revenue $\geq 40\%$ (or $\geq \text{¥}10\text{bn}$) / top-tier exporter / large overseas workforce + English gate / active overseas M&A or plant build / going-global 0→1.

3.3 Channel model: direct lighthouse + co-sell scale

- **P0 lighthouse = direct:** high value, custom diagnostics, face-to-face decision-makers.
- **Scale = co-sell leverage:** Beisen / Mercer / Deloitte embed Pearson language capability into their client journeys.
- **Embed vs compete, per account:** Beisen is both competitor and channel — its AI interviewer lacks real English assessment; Versant fills the gap.

3.4 Pricing posture: wedge low, full-journey high

- **Versant as wedge:** low unit price, short decision chain (TA/HR can buy), minutes-to-score — capture enterprise language data first.
- **Data drives expansion:** use assessment results to sell Mondly (land-and-expand).
- **The verify-and-measure journey earns premium:** the Versant→Profiles→Mondly→re-test quarterly capability report is a high-value deliverable that lands in L&D budgets.

4. How We Sell / 战术打法

Bottom line — Versant opens the door with the shortest decision chain; the diagnostic hook converts; co-sell turns names into meetings.

4.1 Core: Versant wedge + Mondly expansion

Why Versant first: shortest decision chain (TA/HR buy), low price, minutes-to-score, data-driven — and the data *forces* the learning conversation: "Your 2,000 agents score GSE 42-54; here's the training to lift them."

Three sellable scenarios (priority order):

1. **Expat selection** — GSE/CEFR threshold screening; directly attacks the 40% expat-failure rate.
2. **Volume hiring screen** — agent / BPO / e-com / sales roles; repeatable, per-seat pricing.
3. **Training ROI measurement** — pre/post Mondly re-test; turns L&D spend into a quantified business case.

4.2 Language diagnostic hook (converted weapon, proven)

Latest iteration (Aug 2026): the public-signal benchmark — coding an account's international JDs against global peers (L0–L3 signal coding), turning "you have a language gap" into "here is exactly how your peers quantify it" — see [Appendix F](appendix_f_en.html) (opens in new tab).

-  Delivered: **Mindray** (signal-benchmark report, full n=113 snapshot), **BYD** / **Haier** (signal-benchmark + diagnostic v3).
-  Pending (remaining 6 P0s): CATL / Chery / Transsion / ByteDance / SHEIN / Midea.

4.3 Tiered solution matrix (pricing & packaging)

Tier	Scenario	Combo	Output	Budget
Light diagnostic	Early explore	Versant SLT (17-20min)	Org speaking baseline + gap heatmap	Per-use, low gate
Full diagnostic	Scaled outbound	Versant 4-Skills + Job Profiles	4-skill report + role达标 matrix	Mid
Training	Gap clear	Mondly Enterprise (Enhanced/Ultimate)	Personalised learning path	Per-license/yr
Full loop	Deep localisation	Versant→Profiles→Mondly→re-test	Quarterly capability report + ROI	Blended, into L&D

4.4 Co-sell bridge (names → meetings)

Tier	Partner	Value exchange
P0	Beisen	Clients incl. Chery/Changan outbound; AI interviewer lacks real English test → Versant fills
P0	Mercer	Going-global talent solutions + Mettl; runs outbound forums
P0	Deloitte	China-to-Global aids 2,000+ Chinese firms/yr; whitepaper backing
P1	WTW / Korn Ferry / Aon	Embedded at client CHRO side
P1	Moka / Kenexa	HR SaaS, embeddable language module
P2	Outbound SI / service providers	Bound to outbound service chain

One-liner vs Beisen: They own the HR process entry; we own language depth.

4.5 ¥3M+ Buyer Map & warm intro

- **Economic buyer:** CHRO / HR VP / CFO / business-line president (signs).
- **Champion:** L&D director / international-talent lead (drives).
- **Influencer:** overseas-business head, IT, procurement.
- **C-level (big deals only):** CEO / outbound-business president.

Don't hunt for "the boss's phone number" — become the person who solves the boss's outbound-language pain, and the phone comes to you.

5. Customer Reach & Channel Strategy (how to reach decision-makers & build contact)

The prior chapter covers *what* to sell and *how* to sell. This chapter answers the most-often-missing — and most daunting for a newcomer — question: with zero prior experience in this industry, how do you actually reach the decision-makers at target accounts and turn a "name" into a "meeting"? The current plan listed only one route (Beisen-style co-sell). A real enterprise GTM has at least **three tiers and nine channels**.

5.1 First, lock down "who": the buyer map

Reach starts with knowing whose door to knock. Four buyer types hold the language-budget; their pain and lead product differ:

Role	Typical title	Core pain	Lead product
Economic buyer	CHRO / HR VP / CFO	Hiring quality, training ROI, outbound talent reserve	Versant + Mondly

Role	Typical title	Core pain	Lead product
Champion (driver)	L&D director / international-talent lead	In-role English uplift, course completion	Mondly
Influencer	TA director / overseas-business head	Interview-language efficiency, expat failure	Versant
C-level (big deals)	CEO / outbound-business president	Overseas-team comms, localisation stalls	Mondly + Versant

5.2 Channel landscape: three tiers, nine routes

Principle: warm > cold. Referrals convert several times better than cold email in China B2B. Ordered by leverage and newcomer-fit:

Priority	Channel	How to play	Newcomer fit
P0	Industry associations / 工商联	All-China Federation of Industry & Commerce, CCPIT, sector chambers (Contractors' Chamber, CCCME); become "outbound-talent / language" partner → closed-door roundtables, joint whitepaper, annual-meeting keynote	★★★★★ ready member lists + decision-makers; Pearson education brand strong
P0	Ecosystem co-sell beyond Beisen	Microsoft / AWS AMs carry us; HR SaaS (Yonyou / Kingdee / Moka); RPO (Career International / FESCO / CIIC); consulting (DDI / Korn Ferry)	★★★★★ borrow others' accounts, non-overlapping
P0	ABM on the 50 accounts (warm intros first)	One buyer persona + one warm path per account (Mark / China CEO / Microsoft AM intro before cold)	★★★★ list exists, only contact-building left
P1	Industry / HR summit	HRoot, Beisen ecosystem conf, outbound summits (EqualOcean /	★★★★ strong brand exposure,

Priority	Channel	How to play	Newcomer fit
	sponsorship + keynote	EBrun), WAIC AI+Learning; keynote "China outbound language readiness" to collect cards	needs content
P1	Maimai + LinkedIn targeted outbound	Search CHRO / L&D by the 50-account list → connect → value posts → 1v1; LinkedIn for globally-active decision-makers	★★★★ sharpest B2B people-finder in China
P1	Content / whitepaper inbound	WeChat + LinkedIn: "China Outbound Language-Power Whitepaper", Versant ROI cases, free GSE demo to capture leads	★★★ slow-burn but durable
P2	Cold call / email	ABM supplement; free pilot as hook	★★ low yield, not the main bet
P2	Business school / EMBA alumni	CEIBS / Cheung Kong / Tsinghua EMBA alumni are often target decision-makers; reach via alumni events	★★★ needs alumni access
P2	Outbound-service co-referral	Outbound law firms (King & Wood), Deloitte / EY outbound lines, cross-border payment — they touch outbound firms first, refer mutually	★★★ needs partner build

5.3 Key correction: don't sponsor "academic conferences"

You mentioned sponsoring academic conferences — that's the classic newcomer trap. **Academic conferences (professors, researchers, universities) are NOT enterprise buyers**; you won't collect CHRO cards there. Enterprises attend **HR / human-capital / training / outbound / AI+learning** summits. The former builds academic reputation; the latter converts to meetings and pipeline. Keep Pearson's academic relationships

(PTE / English Connect) for brand backing; run enterprise acquisition through industry summits.

5.4 The 30-day contact-building cadence

1. **Named decision-makers** — use Maimai / Qichacha / LinkedIn to put a real name on each of the 50 accounts.
2. **A/B/C tiering** — by outbound intensity + headcount.
3. **Warm path first** — ask Mark, China CEO, Microsoft AM for introductions before any cold touch.
4. **Join associations** — pick 2-3 sector chambers for partner status.
5. **Maimai cadence** — add 5 target decision-makers and post 1 value nugget daily.
6. **Hook to break ice** — free Versant pilot for one hiring cycle.

5.5 The hook: break ice with a free Versant pilot

Don't lead with an annual contract. Use "free / low-cost Versant pilot for one hiring cycle (200-500 tests) → GSE baseline report to CHRO / overseas GM" as the ice-breaker. The report itself becomes the opener for the next Mondly expansion (see §4.2 diagnostic hook). This turns "cold outreach" into "they ask you to interpret the report."

5.6 Relationship to the 3.3 channel model

§3.3 is the framework (direct lighthouse + co-sell scale); this chapter turns "scale" into nine executable reach channels. Framework says *mode*; this chapter says *motion*.

One-line strategy: P0 trio (associations + ecosystem co-sell + ABM warm intros) as the base; P1 summits + Maimai + content for volume; P2 cold + alumni as supplement. You are not blindly cold-calling alone — the 50-account list, the diagnostic weapon, and Group backing are already in hand; what's missing is the execution discipline to build contact, one account at a time.

6. Target Accounts / 打谁: 50-account system (output of the play)

Bottom line — This list is the *output* of the five-step loop + overseas-intensity segmentation above, not a random roster. It validates the logic.

6.1 Pool structure (50 accounts)

Industry	Count	Representatives
Med device / pharma / CXO	10	Mindray, United Imaging, WuXi, Hengrui, BeiGene, Fosun, Intco, Yuwell, MicroPort, Wantai
New-energy / auto / battery	9	BYD, CATL, LONGi, Jinko, Trina, Sungrow, Canadian Solar, Envision, Chery
Automotive	7	SAIC, Geely, Great Wall, Changan, NIO, Fuyao, Sany
Consumer-electronics / internet / e-com	11	Huawei, Xiaomi, Transsion, OPPO, Anker, ByteDance, Tencent, miHoYo, SHEIN, Temu, AliExpress
Construction machinery	4	Sany, Zoomlion, XCMG, LiuGong
Home appliances	4	Haier, Midea, Hisense, Gree
Infrastructure	4	CCCC, CSCEC, CREC, POWERCHINA (recent EPC wins → may rise to P1)
Chemicals	1	Wanhua

Full 50-name list with signals → [Appendix A \(opens in new tab\)](appendix_a_en.html).

6.2 P0 nine (priority battleground)

Account	Outbound pain point	Pearson entry	Decision-maker (named)
Mindray	2025 overseas revenue 53%, first time > domestic	Overseas sales/clinical English + expat training	Li Zaiwen (Global Marketing SVP) ✓ diagnostic delivered

Account	Outbound pain point	Pearson entry	Decision-maker (named)
BYD	Auto + storage dual outbound, aggressive overseas build	Expat + localisation-team English	Stella Li / Li Ke  diagnostic delivered
CATL	Global plant build (EU/US/SEA)	Overseas-plant English + safety comms	To be mined
Chery	2025 exports 1.34M units, #1 consecutively	Overseas-dealer-network English	Zhang Guibing (Int'l GM)
Transsion	"King of Africa," emerging-market depth	Localisation-ops English	To be mined
ByteDance	TikTok multi-country compliance	Cross-cultural + compliance English	Ronnie (HR lead)
SHEIN	Cross-border fast-fashion globalisation	Supply-chain / CS English	To be mined
Haier	Global brand (GEA / Fisher & Paykel)	International-CHRO-scale programme	Yu Wentao (Int'l CHRO)  diagnostic delivered
Midea	Overseas revenue near-half, global manufacturing	Overseas-plant + R&D English	To be mined

7. Quick Wins / 0-90 days

Bottom line — Land 3-5 pilot Versant accounts and ≥ 2 paid contracts in quarter 1; start compliance and localisation in parallel.

Goal	Key action
3-5 pilot accounts	Pick 3-5 from P0; free/low-cost Versant pilot (200-500 tests) → GSE baseline report to CHRO / overseas GM
First paid contracts	≥2 Versant contracts; ≥5,000 tests
2-3 channels	Industry-assoc / 工商联 MOU + co-sell sign (Beisen / Mercer first)
Compliance kickoff	PIPL / data-export assessment start; DPO / legal alignment
Chinese sales kit	Demo / whitepaper / contract-template localisation; China pricing system

8. Longevity / 6-18 month parallel foundation

Bottom line — While we sell, we must build the local foundation (product, hosting, ecosystem, org) that turns quick wins into a durable business.

8.1 Product localisation

- Chinese UI (Mondly / Coach); WeChat / WeCom / Feishu integration; mobile-first.
- China industry packs: outbound manufacturing, cross-border e-com, EPC, customer-service English.
- Translate GSE into HR-language: "what this person can actually do."

8.2 In-country hosting & compliance (critical path)

- PIPL / data-security law: voice / learner-data onshore-storage assessment.
- **Data-export security assessment** (mandatory for export scenarios).
- **Q2 decision: in-country deploy (local cloud) vs compliant offshore** — affects latency, price, enterprise procurement acceptance.
- Local contracts (bilingual), VAT special invoices, RMB pricing.

8.3 Ecosystem & recognition

- HR-SaaS integration (Beisen / Moka / Yonyou): Versant scores flow into existing talent systems.
- PEIC enterprise-recognition path (vs TOEIC; "next-gen speaking-first certificate").
- China-local case library (local proof > global citation).

8.4 Organisation

- Local sales + pre-sales + CS; China pricing authority.
- KPIs: activation, re-test GSE lift, renewal/NRR — not just license count.

9. Roadmap & KPIs / 12 months

Bottom line — Three ramp stages; the Year-1 exit bar is ARR ¥10m+, ≥90% renewal, 2+ local cases.

Stage	Focus	Exit bar
Q1 (0-3mo)	3-5 pilots; first Versant contracts; compliance assess; CN kit	≥2 paid; ≥5k tests
Q2 (3-6mo)	Scale to 8-10; 1-2 Mondly programmes; 2-3 channels; hosting decision	≥5 paid; first learning live
Q3-Q4 (6-12mo)	Scale 15-20; 3-5 channels; localisation v1; PEIC path	ARR ¥10m+ ; renew ≥90%; 2+ CN cases

KPIs: paying accounts / Versant tests / Mondly activation & completion / re-test GSE lift / ACV / renewal / channel-pipeline share.

10. Risks & Mitigations

Bottom line — The two that can actually block us are data compliance and long decision chains — both have a start-now mitigation.

Risk	Mitigation
Data compliance (voice / learner data) blocks procurement	Start compliance workflow now; Q2 hosting decision; DPO / legal aligned
Local low-price competition	Differentiate on assessment validity + GSE + brand; bundle, don't discount
Long chain / budget cuts	Low-friction test entry; sell to outbound-business owners, not only HR
Beisen / platform competition	Co-opetition: embed vs compete per account
Pearson China brand reads "education / study-abroad"	Enterprise positioning: industry events, CHRO roundtables, local cases

11. Asks from You / Mark 支持清单

Bottom line — Seven asks; the first three (pricing, hosting, localisation timeline) are gating decisions I need from this visit.

1. **China pricing authority** — local packaging & discount vs TOEIC / EF / Linguaskill.
2. **In-country hosting decision** — model + budget + timeline; DPO support for PIPL data-export assessment.
3. **Localisation timeline** — Chinese UI (Mondly / Coach), WeChat / WeCom / Feishu integration dates.
4. **Intro to Sharon Hague (ELL) & Vishaal Gupta (ELS)** — 30-min alignment to borrow global assets for China (Mondly VR, English Connect, Lost in Transition, GSE Job Profiles).

5. **Sales enablement** — Chinese demo / whitepaper / contract templates; China test quota.
 6. **Global case rights** — iQor / Smart Axiata / Nikkei / Cognizant / IGA for China proposals.
 7. **Local headcount** — pre-sales / CS (local hire vs remote).
-

12. Open Questions / Open Questions — for our discussion

1. Direct-sales-first or channel-first? *(Rec: P0 lighthouse direct, scale via channel.)*
 2. Versant pricing — benchmark TOEIC, or premium "speaking-first" differentiation?
 3. Year-1 in-country hosting, or compliant-offshore start?
 4. First 2-3 China industry content packs (mfg / e-com BPO / EPC)?
 5. **China Year-1 ARR target: ¥5m / ¥10m / ¥20m?** *(Sets team size, pricing posture, hosting investment — decide in week 1.)*
